Trail Ratings

Easy

Can be travelled in 2wd under most conditions. Rain or snow may make 4wd necessary. Most stock vehicles with minimum 31" all terrain tires with open differentials can negotiate. No lockers or winch necessary.

Moderate

33"+ aggressive tires, locking differentials, winch, and roll cage recommended. Both mechanical and body damage are possible.

Difficult

These are the toughest trails that Golden Mountain has to offer. Mechanical and body damage are both real possibilities. Large, aggressive tires (36"+), locking differentials, winch, roll cage, and skid plates are all strongly suggested.

The risk of damage as well as the difficulty ratings of the trails both increase drastically in the event of rain due to the high clay content in the soil at Golden Mountain Park.
